Intra-Community tax-free supply of goods or services acc. to §4 No. 1b associated with § 6a UStG.

Prices

All prices quoted are net prices and are subject to VAT at the applicable statutory rate.

Our offer is based on the documents available to us when the offer is made. This means that some of the prices are estimated prices which will be charged on the basis of the actual costs incurred once the Adapter has been produced. We would like to point out that only the documentation expressly set out in the offer is included in the scope of delivery.

Samples

At least one current test sample is required to complete the test appliance/test adapter (hereinafter "Adapter"). If there is no current test sample available it may be necessary to carry out improvements to mechanical parts later. This will be charged separately.

Scope of Delivery/Properties

The Adapter will be designed and produced exclusively in accordance with the test point and wiring lists, CAD files and test sample provided to us by your company.

Should this test sample not be complete or should it not have been available to us, no mechanical functional test can take place during the manufacture of the Adapter and no possible damage to the assemblies to be tested can be ascertained. We are not liable for malfunctions of our Adapter if we have not been sent a correct test sample prior to commencement of production.

The Adapter makes contact exclusively with the measuring points and contact points stipulated by your company and may only be used for testing the assembly for which the Adapter was produced.

Obligations to Co-operate/Performance not Included

We would expressly point out that your test sample cannot provide any information regarding the actual series production and accordingly cannot serve as a reference for subsequent series production. Following commissioning of our Adapter you must therefore check a sufficient and appropriate number of assemblies for any damage to the said assemblies employing suitable measures and check the accuracy of the test result before you use this Adapter for testing in series production.

A complete test system is only fully functional once the Adapter has been integrated into an electronic test system with the corresponding test software. Neither the test system nor the test program was made available to us during production of the Adapter. Therefore we cannot test the ability of the Adapter to perform in advance. The implementation of the Adapter in the test system is not part of the scope of our service and must be secured by you.

We are sure you will understand that we cannot accept liability for correct test performance as any such responsibility stems from the construction design of your assembly and the deviations in serial production. Further information can be found in our standard definitions at https://www.atx-hardware.de/pdf/Standard_Definitions-atx.pdf

Delivery Dates and Deadlines

The agreed delivery dates are dependent on due and proper receipt of all materials, the clarification of technical details and are also subject to proper and timely supply by our own suppliers.

Other Conditions

In other respects, we deliver exclusively on the basis of our general terms and conditions which can be viewed on the Internet at www.atx-hardware.de. No conditions used by you shall apply. They shall not even become a component of the agreement if we make delivery without reservation in the knowledge that there are conditions which contradict or depart from these general terms and conditions.

Other information

The quoted unit is only for the use of voltages below 25 V AC or 60 V DC, unless there are further protection devices included in the quotation that explicitly allows the use of higher voltages.

The Adapter is designed for the use in a standard industrial environment (electronic components manufacture in a dust-, corrosive- and frost-protected environment). In case of special environmental requirements, this must be specified at quoting request.

offer validity: 4 weeks

Best regards
